

Group Project

Python and R for Data Science

Data Science and Management

Guidelines

1. Check the suggested datasets from this [list](#).
2. Fill this [form](#) to:
 - Choose the 4 members of the group
 - Set a preference over each dataset
3. After a week, each group will know their specific dataset
4. During the project, the group has to use both R and Python to retrieve, load, clean, process, and analyze the dataset. Each language/framework may be used for different and complementary data analysis.
5. Each group has to:
 - [end of week 11] Submit a (max) 15-page report
 - [week 12] Expose the project work during a 10-minute presentation
